FLUSH PRIMED DOORS

WHY YOU SHOULD CHOOSE OUR DOORS

- 1 **Impact resistance.** We use high density chipboard in our doors, which gives solid weight to our products and makes our doors strong. Making the surface resistant to accidental damage and you can do engraving up to 1/10" deep.
- 2 **Our doors are easy to cut to size.** Our doors can be cut up to two inches on top and bottom without the need for a re-rail. This is possible thanks to the use of a 2.5" thick wood frame all around the entire door.
- 3 **High quality multi-coat primer.** The first layer of primer is pumped with UV paint, which prevents moisture from seeping inside the door, and two subsequent layers of primer with polishing facilitate the final painting and guarantee an excellent appearance of our product.
- 4 **Beautifully sanded and painted door edges.** On our doors you will not see saw marks, burrs or wood structure.
- 5 **The ideal geometry of the door.** This will facilitate the work of any installer and guarantee no rubbing during opening and closing of the doors.
- 6 **We use a dense corrective layer in our SSC door to further fortify the door.**

CONTEMPORARY

BHI Doors modern-style doors are a premium flush door. Our new modern-style flush doors feature a HDF veneer. The channels are routed $\frac{3}{32}$ " deep resulting in sharper shadow lines and a greater definition.

The stile and rail construction is composed of finger joint pine with stave core technology. Stave core doors offer excellent stability against warping and provide ideal durability. Stave core technology allows the door to be used in areas with extreme conditions of temperature, humidity and dryness.
